INTEGRATED WORKPLACE MANAGEMENT SOLUTIONS

WHO WE ARE

We have been a leader in providing North America with Integrated Workplace Management Systems (IWMS) for more than 20 years. We focus on the intersection of information technology and human resources. Our pillars are Agility, Innovation, People and we make sure every interaction with our clients embodies this. Our industry experts help your business align people, processes and technology with facilities and workplace strategy to elevate the employee experience and improve your bottom line. Integrating forecasting tools to help you anticipate and avoid problems, setting you and your organization up for long-term success.

OUR COMMITMENT

Horizant's team of consultants, industry experts, and technical/operations specialists engage clients to help them understand how their overall business strategies integrate with workplace solutions. We balance these objectives with specific facilities and corporate real estate needs by combining leading workplace technology with leading practices.

HORIZANT TEAM

Our team is made up of business domain, technology & operations experts who have decades of experience with both deploying and supporting Corporate Real Estate & Facilities systems across various industries across North America.

AGILITY

Adaptable solutions built for your unique portfolio & people.

INNOVATION

At the front line of IWMS, delivering up-to-date modern technology.

PEOPLE

Businesses are built on people, and our focus is to improve the employee experience.

OUR APPROACH

Our adaptable service delivery model is designed to align with your organization to deliver the IWMS technology you expect.

Our approach to solution design and implementation focuses on engaging your team members at every level, and throughout the entire process - so you're always in the loop. We apply proven methods and leading business practices to your projects, ensuring technology solutions are sustainable and your goals are achieved. We have successfully implemented a wide variety of technologies, ranging from simple CAD systems to large, enterprise-class platforms, and continue to actively service, support and manage these systems today.
